Meritorious ("VG")

- Implement some form of "password salting"
- Add additional rounds of hashing in the server code to strengthen password protection

Lab report/documentation

Each student should submit a lab report containing **at least** the following information ("G"):

- Documentation of changes made in the web server's source code to implement password hashing
- Demonstration of how the implemented changes improve security of the service ("before and after")

Optionally, describe the security benefits of password salting in 500 characters or more ("VG)".

The lab report should be provided as a plain text file (".txt"), Markdown
